- 28 System 9000 shelf trays and storage bins
- 34 Case study

Innovating your logistics for a better world

Meeting the demands of industry

Loading
Safe unit and stacked load values depend on the model of container, type of load, temperature and duration. All Schoeller Allibert products have been designed to provide many years of continuous use in a wide range of demanding industrial applications. The FEA (finite element analysis) software developed by our designers means that we can manufacture products that are both lighter and stronger than ever before. In the event of any doubt concerning the strength or suitability for your application please consult Schoeller Allibert.

Temperature
Schoeller Allibert products are designed for use in a wide range of temperatures. Polypropylene (PP) trays and containers are ideal for use between -10°C to +50°C with many models serviceable from -20°C to +60°C (depending on loading and use). High density polyethylene (HDPE) trays and containers are ideal for use between -30°C to +30°C with many models serviceable from as low as -40°C up to +40°C (depending on loading and use). If the containers or pallets are expected to perform under load at temperatures close to these parameters, then we recommend that you contact Schoeller Allibert to discuss your application.

Washing
Polypropylene trays and containers can be put through tray washers in temperatures over +100°C for short periods. High density polyethylene (HDPE) trays and containers can be cleaned at temperatures up to +80°C. Schoeller Allibert products are compatible with most washing and soda based detergents currently in use.
Chemical resistance
Schoeller Allibert products are resistant to most chemical agents found in industry. In the event of any doubt, please consult Schoeller Allibert.
Quality and environment
All Schoeller Allibert sites are ISO 14001 and ISO 9001 certified . Please visit our Website for more information.

Stacking containers

Euro standard stacking range

Euro standard range

Schoeller Allibert offers the widest range of Euro stacking containers. Seven footprints, fully compatible with Euro pallets and automated conveying system. Straight walls and flat bases optimize internal volumes. Multiple heights make this range the perfect modular storage and distribution solution. RFID option, labels holders, pimple pad areas, provide efficient identification.

More details see product page 04

Stacking KLT and Galia

Stacking KLT and Galia

Automotive standard stacking containers: VDA standard, KLT, RKLT and RLKLT. Containers are strong with multiple label holders and large comfortable handgrips.

Galia Odette 20 Kg range and long Galia box include multiple label holders and locations for automated handling.

More details see product page 20

Other stacking containers

Non Euro stacking containers

Stacking containers in a wide variety of sizes with many models specifically designed for agri-food applications

For automated systems and the automotive industry

For "miniload" automated warehouses systems, LWB and Eureka double bases feature provide long term storage solutions for up to 70kgs unit load.

More details see product page 14

System 9000

System 9000

A modular range of shelf trays and storage bins for the organised storage of small parts and components

In warehouses, workshops, manufacturing facilities, retail stores, hospitals and distribution centres there can be lots of small items to keep in order. System 9000 trays and bins provide an organised storage solution for fast access and retrieval. Whether hung, stacked or shelved, System 9000 shelf trays and storage bins make maximum use of limited space. They are ideal on shelves, in carousel systems or on roller conveyors.

More details see product page 28

Euro Stacking range top benefits

1. Flat bases compatible with all types of conveyors
2. Straight walls to optimize storage volume
3. Integrated label holders on some models
4. Vertical ribs to insure stacking strength up to 1000 kgs
5. All models inter stack for efficient logistics and storage

Eureka Double Base range top benefits

- 1. Specific design for robotized automated handling
- 2. All robots gripping and locations types integrated
- 3. Smooth double base allowing 70 kgs unit load with less than 3 mm long term deflection long term
- 4. Stacking strength up to 1250 kgs

Case study: Renault

Significant savings were made at Renault by the introduction of Galia returnable transit packaging. The investment in the long-life multi-trip Galia containers has proven to give many years of service and can easily be compared against the cost of disposable packaging. In Schoeller Alibert's experience, the cost case is invariably compelling with paybacks that can be measured within months of use.

Poor product protection inevitably results in increased costs. The product protection characteristics of the Galia returnable transit packaging containers are inherently greater than those of the best one-trip alternatives, thus damage has been reduced.

In addition to reduced component damage and operational cost savings, other advantages included increased handling efficiency, with products presented directly to track-side without prior decanting, and a waste-free packaging process and working environment.
